Skills

Game Development

- Unity
- 3D gameplay: movement, obstacles, collisions and a responsive game loop
- VR game development

Programming and Data

- C#, Python, PHP
- SQL (MySQL), Supabase

Core Coursework

- Algorithms and data structures
- Software engineering
- Artificial intelligence
- Embedded systems

Tools

- GitHub
- Microsoft Office: Word, Excel, Outlook

Working Style

- Pair and team project management
- Remote collaboration
- User testing and feedback
- Time and priority management
- Quick learner, adaptable

Languages

Arabic: native
French: fluent
English: upper-intermediate (B2, CEFR-certified)
Spanish: basic

Profile

Software Engineering graduate focused on game development. Delivered two therapeutic VR games during a final-year internship at Inherited Games Studio and built a 3D game in Unity. Experienced in taking a project from build to playtest: testing with real users and iterating on their feedback. Disciplined, quick to learn, and comfortable working in pairs and teams, including remotely. Seeking a junior game developer role.

Professional Experience

Game Development Intern (Final-Year Project) // Inherited Games Studio // February 2026 – May 2026

- Co-developed RehabX with a teammate: two therapeutic VR games connected to a platform for therapists and their patients.
- Managed the project as a two-person team: organised the work, tracked progress and delivered the finished platform.
- Designed a therapist dashboard for remote session setup, live activity monitoring and automatic collection of performance data.
- Centralised session data in a Supabase database to make progress easy to follow.
- Tested the games with real patients, gathered their feedback and adjusted the project accordingly.

Robotics and Programming Workshop Leader

- Ran robotics workshops for children and introduced them to programming through playful activities.
- Supported participants in their creative projects and kept in regular contact with parents and teaching teams.

Seasonal Customer Safety Agent (Pool)

- Looked after customer safety, calmly defused tense situations and helped English-speaking guests and non-English-speaking staff understand each other.

Projects

RehabX // Final-Year Project, Team of Two // Graded “Excellent”

- Two therapeutic virtual-reality games linked to a monitoring platform built by our team: pair project management, therapist dashboard and automatic data collection (Supabase). GitHub: github.com/hazemMtira/RehabX

Chkoba // Personal Project

- Online version of Chkoba, the traditional Tunisian card game, so friends who are far apart can play together. Supabase backend. Play: chkobatn.netlify.app

3D Endless Runner (Unity) // University Mini-Project

- 3D game in Unity with player movement, obstacles, collisions and a responsive game loop.

Awqat // Team Project

- Web platform for discovering and managing events (PHP, MySQL, Python), built by a team, with an AI-assisted recommendation engine.

Education

Bachelor’s Degree (Licence) in Computer Science – Software Engineering // ESSTHS, Hammam Sousse // 2023 – 2026

Modules: Game Development, Artificial Intelligence, Algorithms and Data Structures, Software Engineering, Databases, Embedded Systems, Python

Baccalaureate in Computer Science //
Lycée Ali Bourguiba, Kalaa Kebira // 2022
