

Hazem Mtira

Aspiring Game Developer | Unity, C# & XR Development

Email: hazemofficiel4@gmail.com | Phone: +216 53 216 831 | Location: Sousse, Tunisia

Portfolio: hazemmtira.netlify.app | GitHub: github.com/hazemMtira | LinkedIn: linkedin.com/in/hazem-mtira

Professional Summary

Aspiring Game Developer and final-year Software Engineering student, graduating in 2026 with a final-year thesis graded *Mention Excellent* (highest distinction), completed during a Game Development internship at Inherited Games Studio. Built RehabX, a modular VR rehabilitation platform for Meta Quest, including a custom hand-tracking gesture system tested with real patients. Also experienced in Python and full-stack web development through team academic projects. Currently looking for junior game development opportunities while building personal projects.

Skills

- **Game Development:** Unity Engine, C#, ShaderLab (Custom Shaders), Game Design Principles, Gameplay & Level Mechanics
- **Game Technology:** Meta Quest Development, Hand Tracking / Gesture Detection, VR/AR/XR Interaction, Physics-Based Interaction
- **Programming Languages:** C#, Python, JavaScript, Java, C, C++, PHP, TypeScript
- **Tools & Supporting Skills:** Git, GitHub, VS Code, Supabase, Figma (UI/UX), Full-Stack Web (HTML, CSS, PHP, MySQL), Microsoft MakeCode
- **Soft Skills:** Team Collaboration, Communication, Adaptability & Fast Learning, Problem-Solving, Time Management, Remote Collaboration

Experience

Game Development Intern — Inherited Games Studio

Mar 2026 – May 2026 | Unity, C#, Meta Quest, Hand Tracking, Supabase

- Completed a Game Development internship at Inherited Games Studio, co-building RehabX, a modular VR rehabilitation platform for Meta Quest, with one teammate — submitted as my final-year thesis and graded *Mention Excellent* (highest distinction).
- Built two VR serious games: *Critter Pop VR* (upper-limb rehab via controller-free hand tracking) and *Step Stones VR* (lower-body balance and coordination, physics-based).
- Designed a custom gesture-detection system for Critter Pop VR from scratch, using anthropometric body-proportion estimation to derive elbow-angle data the Meta XR SDK doesn't expose.
- Integrated both games with a Supabase backend and a therapist-facing dashboard (remote session configuration, live monitoring, automatic KPI collection), and tested the system with real patients.
- GitHub: github.com/hazemMtira/RehabX

Projects

Endless Runner Game (Subway Surfers-Inspired)

University Mini-Project | Unity, C#

- Built a 3D endless-runner in Unity — player movement, obstacle/collision mechanics, and a tuned, responsive core loop.

Awqat — AI-Powered Event Discovery & Management Platform

Team Project | PHP, MySQL, Bootstrap, Python, YOLO

- Built a full-stack event platform with a project team, contributing across the whole project — from initial concept through frontend and backend implementation.
- Built the AI-assisted recommendation engine in Python, and explored YOLO-based computer vision as an experimental feature.
- GitHub: Team repository at github.com/mrsnifo/awqat-event-management-fyp-2025

Education

Bachelor's Degree (Licence) in Computer Science — Software Engineering, ESSTHS — École Supérieure des Sciences et de la Technologie de Hammam Sousse, Tunisia (2023–2026)

Relevant coursework: Game Development, Artificial Intelligence, Algorithms & Data Structures, Software Engineering, Embedded Systems, Python

Computer Science Baccalaureate, Ali Bourguiba High School, Kalaa Kebira, Tunisia (2022)

Languages: Arabic — Native | French — Fluent | English — B2, Upper-Intermediate (CEFR Certified) | Spanish — Basic
